Cogtics – Production■Ready MVP Specification

Revenue Integrity & Revenue Recognition Platform

1. Product Definition

Cogtics is a revenue integrity and revenue recognition platform for B2B SaaS companies. It reconciles CRM, billing, accounting, and contract data into a canonical truth model and runs deterministic, explainable detection logic to identify revenue leakage and recognition issues.

2. Target Users

Primary buyer is the CFO with Finance Operations as co■buyer. Daily users are finance analysts and RevOps analysts responsible for billing accuracy and revenue reporting.

3. Day■1 Integrations

Salesforce, HubSpot, Stripe, QuickBooks, and DocuSign. All integrations are read■only, OAuth■based, and customer■owned. Manual CSV and PDF uploads are supported as fallback.

4. Data Ingestion

Cogtics supports API■based ingestion and manual uploads. All ingested data is normalized into a canonical schema and versioned into immutable snapshots for auditability.

5. Canonical Data Model

Key entities include Customers, Contracts, Contract Terms, Revenue Obligations, Revenue Schedules, Invoices, Invoice Lines, Payments, and Recognition Events.

6. Contract Intelligence

Contracts are ingested as PDFs and parsed into clause■level structured terms with confidence scoring. Ambiguous terms require explicit user confirmation.

7. Revenue Recognition

The system supports performance obligations, transaction price allocation, deferred revenue, and time■based recognition. Recognition schedules are reconciled against billing and accounting data.

8. Detection Engine

Cogtics uses deterministic rules with versioning. Each issue includes expected vs actual calculations, source references, and clause citations. ML is used only for prioritization.

9. Simulation Mode

Simulation mode allows CFOs to run what■if scenarios without mutating source data. Simulations operate on snapshots and produce delta impact analysis.

10. Workflow & Evidence

Issues follow an open, resolved, or dismissed lifecycle. Each issue contains an evidence pack including calculations, source records, and contract excerpts.

11. Exports

Supported exports include CSV, PDF reports, and scheduled email digests. All exports include snapshot IDs, rule versions, and timestamps.

12. Security & Compliance

SOC2■ready posture with audit logs, encryption at rest and in transit, tenant isolation, and configurable data retention policies.

13. Performance & Scale

First sync target under four hours. Daily detection runs. Supports ~100k invoices per year per tenant with two years of historical backfill.

14. Deployment

Hosted on AWS with monitoring, logging, alerting, feature flags, and versioned connectors.

15. Non■Goals

Cogtics does not execute billing, modify source systems, or replace ERP, CRM, or billing platforms.
