Cogtics – UX Plan Decisions (MVP-Oriented)

A. Product Philosophy & UX Posture

Adaptive by role; CFO sees summaries, analysts see depth.

Opinionated UI that guides actions.

Allow progress with warnings for incomplete data.

Cogtics may hide results if confidence is too low.

B. Navigation & Mental Model

Primary mental model: Issues-first.

Default landing: Executive Summary for CFOs, Issues for others.

Flat navigation with few core sections.

Global search: Google-like with filters.

C. Roles & Permissions

CFOs see simplified views by default.

Detection logic and interpretations are Admin-only.

No reviewer vs executor split in MVP.

Viewers can export summaries only.

D. Onboarding & First-Time Experience

Free-form onboarding checklist.

Allow exploration before sync completes.

Guided demo mode with synthetic data.

Background sync with partial access.

E. Integrations UX

Integrations are infrastructure-like but visible.

Users can disable objects and date ranges.

Source precedence implicit.

Partial results shown with banners if integration breaks.

F. Contracts & Ambiguity Handling

Show only relevant extracted terms.

Conflicts shown via comparison view.

Contract verification via task inbox.

Confidence shown only when low.

G. Issues & Investigation Model

Group issues by financial impact by default.

No auto-resolution; human confirmation required.

Separate false positives from accepted leakage.

Dismissed issues reappear with warnings.

Issues treated as living cases.

H. Evidence & Explainability

Expandable evidence details by default.

Raw API payloads hidden.

Calculations shown as tables with optional formulas.

Confidence indicator is sufficient.

I. Simulation UX

Primary user: CFO.

Auto-suggested simulations.

Simulations can be saved as templates.

Multiple fixes allowed per simulation.

No approvals in MVP.

J. Revenue Recognition UX

RevRec embedded inside Issues and Contracts.

Tables favored over charts.

Manual changes disallowed; simulation only.

K. Exports & Sharing

Exports are point-in-time snapshots.

PDFs resemble audit reports.

Email digests are action-driven.

No external sharing links in MVP.

L. Notifications & Nudges

Notify on high-impact issues and data freshness.

User-configurable notifications.

Nudges surface unreviewed items.

M. Auditability & Trust UX

Snapshot metadata on demand.

Dedicated Audit View planned.

One-click audit bundle exports.

N. Future-Proofing UX

Multi-entity and multi-currency anticipated.

Assume finance maturity.

Selective coaching via nudges.

O. Visual & Interaction Style

Hybrid professional + modern SaaS.

Light and dark mode supported.

Color used sparingly and accessibly.

P. Final Framing

Cogtics feels like a revenue command center.
